

Ozone for poultry application

- To Disinfection of Poultry Farms (prevention of diseases spread such as influenza)
- To Disinfection of Egg Setter and Hatchery Air
- Farms Water Treatment
- To Be Alternative for Formalin in Egg Gas Room
- To Disinfection of Workers Cloths
- To Disinfection of Chicken Carcass with Ozone Water in Slaughter House (carcass smell elimination and extend life of carcass)
- Silo Disinfection
- To Be Alternative for Disinfectants in Showers
- Use of Ozone Water for Washing Equipment

Ozone is the Strongest Disinfectants

Ozone is used in the poultry industry as air and water disinfection /treatments for the storage, incubation of eggs and breeding of healthy birds. Ozone being an effective oxidant, it is mostly used for processing, storage and transport of poultry and meat products. Ozone water is used to feed the birds as drinking water, wash and sterilize meat and equipment to kill harmful bacteria, virus, pathogen and deodorized the air inside poultry farm.

An Effective Alternative for Percidine, Hydrogen Peroxide, Chlorine, Formaldehyde and a Variety of Chemical Disinfectants
